immediately before puberty seems to indicate an increased production of pre-androgens in the adrenal cortex. The total amount of 17-KS and of 17-OH determined simultaneously reaches the values of adults after a gradual increase beginning in infancy.

For their technical assistance we are indebted to Miss Kornélia Adek and Miss Mária Kazik.

Erratum

It is regretted that in the paper by J. Lister on ‘Blood Supply and Oesophageal Atresia’, which appeared in the previous issue (Arch. Dis. Childh. (1964), 39, 131), Figs. 8 and 9 on page 135 should have been labelled Figs. 10 and 11, and Figs. 10 and 11 on page 136 should have been labelled Figs. 8 and 9.
