In phenylketonuria Aminogran improves the quality of family life

"The children accepted it (Aminogran) easily and fed it to themselves instead of having to be spooned or force fed, and consequently the quality of family life improved."

(Arch. Dis. Childh., 1970, 45, 640)

Compared with previously available foods

Amınogran

is less unpalatable

is smaller in bulk so that the child is able to eat larger amounts of phenylalanine-free foods

an be given as a medicine so that it does not spoil the rest of the meal allows a diet which appears more similar to that of the normal child

Each carton of Aminogran includes a 150g container of amino acid food

"A safe and effective method of treating house dust mite sensitivity"

This was the conclusion reached by a group of British clinicians, in a preliminary report on ALLPYRAL-MITE FORTIFIED HOUSE DUST.

For those patients with house dust mite sensitivity, ALLPYRAL-MITE FORTIFIED HOUSE DUST offers specific hyposensitisation therapy; the preliminary report, on an uncontrolled trial, suggests that good results might be achieved in as many as 83% of patients.

1. (1970)---IN PRESS.

Allpyral mite fortified house dust

Like all Allpyral allergen extracts, mite fortified house dust is prepared by pyridine extraction and alum precipitation. This type of extract has been shown to give fewer reactions than the traditional aqueous extracts.

Presentation

Vials containing 100 mg, 250 mg, 500 r and I gram cephaloridine in boxes of fly

A new palatable presentation of pancreatin granules.

considerably reduces the taste associated with normal pancreatins.

Zypanar granules contain proteolytic and amylolytic activities equivalent to Pancreatin 3.N.F. It also contains lipolytic activity equivalent to not less than 20 lipase u./gm. (Willstater). The granules are wax-protected so that optimum effect occurs in the intestines. It has been found that the presentation considerably reduces the taste associated with normal Pancreatin.

Indicated in
Cystic Fibrosis
Steatorrhea
Pancreatitis
Other symptoms of Pancreatic
Deficiency

Packs
Bottles of 200 and 500 grammes.

JA2 ZY I

PKU treatment simple · effective · safe · low cost

ALBUMAID XP

Albumaid XP has an unequalled record in the active growing period in a child's life in respect of height, weight and neurological development. It contains all the essential elements of beef and is just as palatable. Every child is safe with Albumaid XP.

PKAID I

PKAID I allows a variation in the low-phenylalanine diet of children who are 3 years old and upwards and this is of great value. Other alternatives cost considerably more. You can reduce your prescribing costs with PKAID I.

PKAID II

PKAID II is excellent for older children on a low protein high calory diet. They will benefit considerably from its inclusion in your treatment with as little as 10 grams a day. Your prescribing costs will be greatly reduced with PKAID II.

Anti-staphylococcal agents file.Subject:Floxapen

Floxapen: newest of the Beecham anti-staphylococcal penicillins. Background: Floxapen extends the therapeutic advantages of two earlier penicillins:

Celbenin—the original anti-staphylococcal penicillin;

Orbenin-now accepted as the standard by which other

anti-staphylococcal agents are judged.

Characteristics of Anti-staphylococcal Penicillins

- 1. Active against virtually all staphylococci.
- 2. No development of resistance during therapy.
- 4. Penicillin-safe, even during prolonged therapy. 3. Bactericidal.

Exceptional absorption: equally well absorbed orally or intramuscularly; with the same dose, Floxapen gives twice the oral absorption of Orbenin.

These advantages are unrivalled in the treatment of staphylococcal infections. Effective blood levels are reached in half an hour.

Floxapen: Best of the anti-staph.agents

Your Beecham Representative will be bringing you the complete file on Celbenin,*Orbenin* and Floxapen. Or write to us: Beecham Research, Freepost, Brentford, Middlesex.

Further information is available on request. Floxapen* (flucloxacillin) is a British product originated by

Beecham Research Laboratories Brentford, England.

This hydrocephalic child has been wearing the

SILASTIC® Hydrocephalus Shunt

for four years without revision (and it's not in her vascular system)

SILASTIC Hydrocephalus Shunt (Ames design)

Single unit, double chamber flushing device offers positive check on shunt function and patency

An improvement in the management of hydrocephalus that bypasses the vascular system by draining excessive fluid into the peritoneal cavity. Extra long peritoneal tubing accommodates child's growth, eliminates periodic revisions.

Double chamber design permits selective flushing of either catheter and keeps pressure away from burr hole. Device also provides a convenient self-sealing route for injection or withdrawal of fluids.

Many infants cannot easily adjust; but the DRAEGER "BABYTHERM 4200" enables the doctor and nurse to wean the child into a normal environment. In the open ward, draughts can be excluded; inspired air can be moistened and enriched with oxygen, the bed can be tipped up to 20° either side of horizontal. Additional apparatus for the DRAEGER "BABYTHERM 4200" can be used for resuscitation or blood exchange. A radiation heater prevents the infant's body cooling, whilst allowing ease of access by doctors and nurses.

Go On the basis of our earlier experience, we said of trimethoprim that 'we believe it to represent a major discovery and to have far-reaching therapeutic possibilities.'

Not only have we had no subsequent reason to after this belief, but in our view some very promising possibilities have yet to be explored.

More effective than ampicillin or tetracycline

In the reduction obtained in sputum volume and purulence SEPTRIN* has been shown to be superior to either ampicillin or tetracycline. **

Highly active against both primary and secondary invaders

"....not only are the two primary pathogens Strep pneumoniae and Hinfluenzae sensitive, but so are secondary invaders such as klebsiella which often replace them after antibiotic treatment."²

"It is seldom at the completion of a clinical trial that authors are inclined to classify an antimicrobial..., but in this case, on our results, we feel that the combination of trimethoprim plus sulphamethoxazole can only be considered excellent on the criteria originally specified, namely the elimination of the infecting microorganism."

CRESCORMON® human growth hormone for pituitary dwarfism

Growth hormone is species-specific. CRESCORMON® (Human Growth Hormone Kabi) is prepared from human pituitary glands. (Biochim, Biophys. Acta, 74, 525, 1963).

Only carefully selected material is used; the homogeneity of the resultant highly purified human growth hormone is checked and its potency is assayed by double antibody radioimmune and biological techniques.

Treatment with CRESCORMON® results in accelerated growth velocity, most marked during the first month, and corresponding to age over the first year.

No adverse reactions have been observed, though in a few patients a low titre of antibodies has developed.

Product Licence No. 0022/0020

CRESCORMON® is manufactured by AB Kabi, Stockholm, Sweden, and is available in the U.K. only from:

Kabi Pharmaceuticals Limited, Bilton House, Uxbridge Road, Ealing, London W5 2TH.

PROBLEMS OF THE NEWBORN

from the British Medical Journal

Many doctors outside the neonatal and paediatric field may be unaware of the rapid advances made in the care of the newborn in the last decade. Last year the *B.M.J.* published a series of articles discussing the diagnosis and management of common conditions affecting newborn babies. The articles have been revised by their authors and collected together as a booklet, forming a useful guide to both serious problems and more everyday topics which confront doctors in their practice.

Metabolic Aspects of Disease

Treatment of inborn errors has advanced our basic knowledge of disease. Metabolic problems are also a frequent consequence of disease.

Day-time variations in serum phenylalanine (triangles) and tyrosine (circles) in a phenylketonuric child having his first meal as usual at 07.45 hours or fasting until 11.45 hrs. Note the phenylalanine depressing effect of the breakfast (phenylalanine-restricted meal with Albumaid (R) (Güttler, Olesen & Wamberg—Kennedy Institute—Denmark in Enzymopenic Anaemias, Lysosomes and other papers, pages 149-158 E. & S. Livingstone.)

PRECISION PRODUCTS:

Designed to meet the metabolic defect are called for.

Products more fundamental than enzymes.

Products more basic than protein.

Products which enable precise nutrition

Products which succeed where cows' milk is a failure.

PRECISION PRODUCTS FOR:

Phenylketonuria, Homocystinuria, Cystinosis, Maple Syrup Urine Disease Hyperglycinaemia, Hyperprolinaemia, Arginine Succinic Urea, Histidinaemia, Tyrosinosis, Carbohydrate and Protein Intolerance, Malabsorptions, Cystic Fibrosis, Glycogen Storage Disease.

MILNER SCIENTIFIC AND MEDICAL RESEARCH

Now maintains a world-wide interest in every aspect of metabolism in disease, and products are directly available in most countries.
