Milupa introduce
Milumil
A new generation
of baby milks.

Milupa is an international baby food company, long established in Europe, with manufacturing facilities in West Germany, France, Austria, Portugal and Switzerland. Milupa have been established in this country since 1973 and have made available a range of cereal foods and infant foods which have become popular with mothers, babies and their medical advisers. Now Milupa are introducing Milumil – a new modified milk food for babies who cannot be breast fed.

Milk powders may become compressed in the scoop leading to overfeeding.

Milumil granules are easier to measure and less likely to become compressed.

Milumil, granulated for easier measuring and mixing.

Milumil granules are easier to measure and aid the more accurate reconstitution of bottle feeds. They help to reduce the risk of over-concentration and over-feeding. The granules are easy to mix, in the bottle, without lumps and help to spread all

essential ingredients evenly throughout the feed.

Milumil, safe and satisfying for babies.

The composition of Milumil has been carefully modified to make it suitable for babies from birth onwards when breast feeding cannot be established. A Milumil bottle feed provides acceptable levels of protein and minerals. The fat content has been modified, by partially replacing butter fat content with vegetable oils, to obtain a spectrum of fatty acids similar to that in breast milk. The carbohydrate content of lactose, malto dextrin and amylose is satisfying for babies throughout the milk feeding stage.

Send for samples and information.

Milumil is available nationally through retail pharmacies. Write for information and samples to Medical Information Department, Milupa Limited, Milupa House, High Road, Cowley Peachey, Middx UB8 2JA or telephone West Drayton 48286.

Septtrin in otitis media

the all-round cover that makes sure

"As half the reported cases of otitis media are caused by a pneumococcus and nearly half of those occurring in the under-five age-group are due to *Haemophilus influenzae*, ampicillin or trimethoprim with sulphamethoxazole (the Septtrin* combination) is the drug of first choice."

Practitioner (1970), 204, 582

Septtrin has a bactericidal action against the main pathogens responsible for otitis media, particularly *H. influenzae*. Add to this its speed of patient response and convenient dosage, and it is easy to see why more and more doctors are making sure with Septtrin in otitis media.

Septtrin contains trimethoprim and sulphamethoxazole.

Atopic Allergy?

a hereditary predisposition?

"In children with a double parental history of atopic disease the incidence of such disease was higher than in children with a single such heredity in whom, however, the incidence was higher than in children without any parental history of atopic disease."

When history and examination are equivocal the use of IgE as a parameter for atopic allergy either for diagnostic or predictive purposes should be decisive.

STATISTICS AT SQUARE ONE

by T. D. V. SWINSCOW

from the British Medical Journal

The statistical testing of data is indispensable in many types of medical investigation and a help on countless occasions in clinical practice. This book provides step-by-step instruction. Subjects covered include standard deviation, χ^2 tests, t tests, non-parametric tests, and correlation. The book includes sections on Fisher's exact probability test and rank correlation not published in the *B.M.J.* series. Methods specially adapted to pocket calculators.

"The ability to put symbols in sequence may well be one of the greatest advances in man's development . . . This excellent and attractive volume will give you an idea into which category an article or projected article fits. The ink you save may be your own. It is superb value." O'Donnell, Barry, *British Medical Journal*, 1977, 1, 451.

" . . . the reader is introduced to the most important statistical concepts in a concise, straightforward manner. Dr. Swinscow's commonsense approach to his subject is outlined in the introduction. . . ." Murray, J. J., *British Dental Journal*, 1977, 142, 81.
