If a mother can't breastfeed Milupa now offer <u>two</u> granulated formulae

New Aptamil

 a fully adapted baby milk formula that may be preferred for the newborn infant where breastfeeding is not chosen or isn't possible.

- low sodium levels
- adapted protein content
- lactose is the only carbohydrate
- added trace minerals

Milumil

- a modern modified baby milk that is particularly suitable when baby needs a more satisfying milk food.
- easily digested fat content
- amylose and maltodextrin in addition to lactose
- experience shows good acceptability

Everyone agrees that breastfeeding gives a baby the best start in life, but when breastfeeding is not chosen or is not possible Aptamil or Milumil can be used with confidence. They meet the latest DHSS recommendations for the composition of infant formulae and are granulated for easy mixing and measuring. Aptamil and Milumil are available from your local chemist.

Paediatric Pathology

Edited by Colin L. Berry, Professor of Morbid Anatomy, Institute of Pathology, The London Hospital Medical College

With contributions by R.H. Anderson, A.E. Becker, M.J. Becker, C.L. Brown, J.N. Cox, J.W. Keeling, B.D. Lake, P.A. Revell, R.A. Risdon, J.F. Smith, and M. Swash

1981. 673 figures. XI, 697 pages. Cloth DM 170,-; approx. £40.50 ISBN 3-540-10507-7

Distribution rights for Japan: Maruzen Co, Ltd., Tokyo

The increased provision of facilities for neonatal and paediatric care in the last twenty-five years has been accompanied only in part by appropriate developments in pathology. Specialist pathologists are many fewer than paediatric departments and details of the advances in knowledge of the pathogenesis of diseases in childhood are not uniformly available. In many institutions, an individual with a special interest rather than a special training will be responsible for paediatric pathology, and it is to this group of histopathologists that this text is addressed. For this reason, Paediatric Pathology is not written as a comprehensive text and is not intended to act as a reference volume. Areas which may produce particular difficulties for the individual with little specialist knowledge of the very young are dealt with in more detail

(e.g. the lung) and, in general, entities in which the histopathology does not differ greatly from the adult disease are considered briefly. An account of developmental processes is included where prenatal considerations are helpful in understanding a particular entity. A number of specialist topics which are known to trouble those who work in nonspecialist departments are described fully (diseases of the muscle) or provided with guides to investigation (metabolic diseases). The value of investigation and careful description of abnormalities of development is also emphasized.

Contents: Examination of the Fetus. - Placental and Abortion Pathology. - Congenital Malformations. - Cardiac Pathology. Central Nervous System. - Gastrointestinal System. - Liver and Gallbladder. - Respiratory System. - Diseases of the Kidney and Lower Urinary Tract. - Diseases of Bones and Joints. - Muscle and Peripheral Nerve. - Spleen, Lymph Nodes and Immunoreactive Tissues. - Endocrine Pathology in Paediatrics. - Metabolic Disorders: General Considerations. - Embryonic Tumours of Children. - Sudden Infant Death Syndrome and Nonaccidental Injury. - Subject Index.

Diagnostic Imaging in Pediatric Trauma

By J. L. Gwinn, P. Stanley, Children's Hospital of Los Angeles With contributions by G.F. Gates, F.A. Lee, J. G. McComb, J. H. Miller, C. J. Schatz, H. D. Segall, F. Y. Tsai

1980. 275 figs. in 468 sep. illus., 7 tabs., 212 pp. Cloth DM 76,-; approx. US \$ 35.40 ISBN 3-540-09473-3

from the reviews:

"This edition is welcomed as it deals with all aspects of paediatric trauma, a subject usually not well covered in general textbooks. Each chapter deals adequately with the specific organ system and suggests a logical approach to a clinical prob-lem... Your reviewer enjoyed reading the book, and having obtained some useful tips, is now a little wiser. Clinical Radiology

"Again proving that children are not merely small adults Drs. Gwinn and Stanley have composed a careful and substantive work on pediatric trauma."

Diagnostic Imaging of the Kidney and Urinary Tract in Children

By A. R. Chrispin, I. Gordon, C. Hall, C. Metreweli The Hospital for Sick Children, London

1980. 271 figs. in 418 sep. illus. 224 pp. Cloth DM 118,-; approx. US \$ 55.00 ISBN 3-540-09472-5

from the reviews:

This book is a valuable and welcome edition for those who are involved in the diagnostic investigation of children with kidney or urological problems. Coming from a world-renowned centre of paediatric care, the book's objective is to help indicate those techniques which may be most appropriately used, in an integrated way, to give information which is essential to the rational management of an individual child's problem. It is highly recommended to diagnostic paediatric radiologists, physicians in nuclear medicine, paediatricians, paediatric surgeons, urologists, and all those concerned with the care of the children suffering from renal and urological disorders.
