

Supplementary Figure 1. A. Raw distribution of pediatric cotinine levels. B. Log-transformed pediatric cotinine levels. Supplementary figure 3. A. Raw distribution of monthly pediatric cotinine levels. B. Log-transformed monthly pediatric cotinine levels. The difference in pediatric cotinine between the intervention and control group using the raw distribution was non-significant [$p=0.098$, CI: -0.160, 1.887]. The same analysis in the log-transformed distribution was also non-significant [$p=0.082$, CI: -0.009, 0.147].
