

Supplemental figure 4. Prevalence of stunting (HAZ < -2SD) and severe stunting (HAZ < -3SD) with 95% confidence intervals from one month to approximately 12 years of age by intervention group. Stunting (HAZ < -2, upper sets of lines) and severe stunting (HAZ < -3, lower sets of lines) are shown.

SP = sulfadoxine-pyrimethamine, AZI-SP = intervention group with monthly SP and two doses of azithromycin.
