

Revised and Re-set

MODERN METHODS of FEEDING IN INFANCY AND CHILDHOOD

by
DONALD PATERSON AND GEORGE NEWNS

For many years this book has been popular not only with medical practitioners and students, but also with nurses, midwives and mothers of young children. The last revised edition was published in 1947 when wartime standards of feeding still prevailed. This new, tenth edition has been almost completely rewritten and with new illustrations, some of the artificial foods have been replaced by later preparations, and the latest work on lactation, breast feeding and nutrition in health and disease has been incorporated.

Dr. Newns is Physician at the Hospital for Sick Children, Great Ormond Street, and the Dean of the Institute of Child Health, University of London.

Tenth edition. Demy 8vo. Illustrated 15s.

MODERN PROBLEMS IN PEDIATRICS—VOL. I

Edited by
A. HOTTINGER and F. HAUSER, Basel

From the Preface

This volume is the first of a series entitled "Modern Problems in Pediatrics". This series will from time to time present surveys of developments in various fields, intended both for those whose work is not directly connected with the subject treated and for the specialist seeking an over-all picture. By including these volumes in the series "Bibliotheca Paediatrica" we wish to emphasize their connection with the "Annales Paediatrici". It is hoped that they will help to foster contact between the research-worker, clinician and practising physician.

A cross-sectional picture through the problems of modern pediatrics cannot, of course, be completed in a single volume; that is why we are planning to publish further volumes treating other important themes. The editors hope that in preparing these further volumes they will continue to enjoy the support of their colleagues all over the world.

The volume contains 88 articles under the following headings:

Historical. Prenatal Diseases. Perinatal Diseases. The Premature Infant. Nutrition and Nutritional Disturbances. Physiology. Metabolism. Allergy. Infectious Diseases. Tuberculosis. Hematology. Liver. Tumours. Morbid Anatomy. Surgery and Orthopedics. Neurology and Psychiatry. Individual Contributions.

1954 844 pages, 180 figs. 105s. (for subscribers to the Series 80s.)

SICK CHILDREN

By DONALD PATERSON, M.D., F.R.C.P.

Revised by REGINALD LIGHTWOOD, M.D., F.R.C.P., D.P.H.

With the assistance of F. W. S. BRIMBLECOMBE, M.D., M.R.C.P., D.C.H.

Revision has been so heavy that this now reads as a new book. D. Paterson's plan has been retained and, as in previous editions, the main emphasis is on the diagnosis and treatment of the commoner conditions.

Details of antibiotics, sulphonamides, other drugs, and of vitamin preparations, the electrolytes of the body fluids and ossification data appear as appendixes, and normal data for blood composition, cerebrospinal fluid, faeces, and urine, are given on the end papers for easy and rapid reference. New illustrations appear throughout the book.
