# For the medical treatment of hypertrophic pyloric stenosis

## SKOPYL

BRAND OF METHYL SCOPOLAMINE NITRATE

a powerful antispasmodic  
without central depressant action

**SKOPYL\*** is one of the most powerful spasmolytics known, the effect in vitro being five times greater than that of atropine, and ten times greater than that of scopolamine. The toxicity is three times that of scopolamine. Because of the greater activity the dose and the relative toxicity are correspondingly less.

**SKOPYL** has been in clinical use for about ten years. Comprehensive experience has shown the preparation to be especially valuable in all conditions where spasmolysis and inhibition of secretion is desirable. Side-effects are rare and usually very slight, even when large doses are used.

**IT IS** in paediatrics that **SKOPYL** is most useful, and the value of the preparation is best seen in the treatment of hypertrophic pyloric stenosis, where it has been proved able to replace surgery in many cases. Good results have also been obtained in infantile dyspepsia, and during the spasmodic period in pertussis.

For clinical references and directions for dosage, see a special booklet that will be sent on request.

**SKOPYL** is available in tablets of 0.5 mg. and 0.1 mg. (**SKOPYL MITE**), and in 0.25% w/v solution for sublingual use.
