In pituitary dwarfism

CRESCORMON[®]

human growth hormone

Crescormon is a highly purified preparation of human pituitary growth hormone thoroughly tested for homogeneity and potency.

Substitution therapy with Crescormon in patients suffering from GH deficiency leads to an acceleration of growth. The therapy is safe and no resistance to treatment has been reported.

Crescormon is standardized both by radio-immunological determination and by biological assay. Each vial contains 4 IU determined against IRP Growth Hormone (WHO).

Indications

Dwarfism due to decreased or failed secretion of pituitary growth hormone. The diagnosis should be verified before the preparation is administered by an investigation of the pituitary function.

Contraindication

Diabetes mellitus.

Precautions

In spite of rigorous requirements for the collection and careful control of the pituitary glands used in the preparation of Crescormon, the risk of transmitting hepatitis cannot be excluded. The risk may be considered extremely small, however, and no cases have as yet been reported.

Side Effects

In clinical trials Crescormon has elicited the formation of antibodies in low titre in a few patients, which, however, has not affected the growth rate. Otherwise no adverse reactions have been observed.

Crescormon[®] is manufactured by AB Kabi, Stockholm, Sweden, and is available in the U.K. only from:

Kabi Pharmaceuticals Limited,
Bilton House, Uxbridge Road,
Ealing, London W5 2TH.

Telephone: 01-567 4717 or 01-579 1871

from whom further information can be obtained.

Outside U.K. information and supplies are available from the respective Kabi representative or directly from AB Kabi, Pock, S-104 25 Stockholm, Sweden.

Dosage

The dosage is individual, but in general a dose of at least 0.5 IU per kg body weight per week, divided into two to three intramuscular injections, is recommended.

Administration

Crescormon should be injected intramuscularly. The solution for injection is prepared by adding 2 ml Sodium Chloride Injection to the lyophilized substance in the vial. A made-up solution should be used immediately after preparation.

Storage

Refrigerator (2-5 °C).

Pack

Crescormon combined package of lyophilized sterile HGH 4 IU (about 2 mg) and Sodium Chloride Injection in an ampoule of 2 ml.

Product Licence No. 0022-0020

SEPTRIN

first

SEPTRIN presents your treatment in a nicely flavoured suspension to make it acceptable to the patient.

fast

SEPTRIN rapidly obtains effective blood, urine, and kidney tissue levels with simple twice daily dosage.

decisive

SEPTRIN ensures coverage against a wide range of pathogens; and SEPTRIN crushes bacterial resistance with a bactericidal action which differs essentially from that of the antibiotics.

SEPTRIN* contains trimethoprim and sulphamethoxazole. Full prescribing information is available on request.

Emotional Problems in Childhood and Adolescence

During 1972 a series of articles appeared in the *B.M.J.* on emotional problems in childhood and adolescence. These articles, revised and brought up to date by their authors, have been collected to form a useful handbook on practical advice to the practising doctor on a subject which may give rise to many difficulties.

Metabolic Aspects of Disease

Treatment of inborn errors has advanced our basic knowledge of disease. Metabolic problems are also a frequent consequence of disease.

Day-time variations in serum phenylalanine (triangles) and tyrosine (circles) in a phenylketonuric child having his first meal as usual at 07.45 hours or fasting until 11.45 hrs. Note the phenylalanine depressing effect of the breakfast (phenylalanine-restricted meal with Albumaid (R) (Güttler, Olesen & Wamberg—Kennedy Institute—Denmark in *Enzymopenic Anaemias, Lysosomes and other papers*, pages 149-158 E. & S. Livingstone.)

PRECISION PRODUCTS:

Designed to meet the metabolic defect are called for.

Products more fundamental than enzymes.

Products more basic than protein.

Products which enable precise nutrition.

Products which succeed where cows' milk is a failure.

PRECISION PRODUCTS FOR:

Phenylketonuria, Homocystinuria, Cystinosis, Maple Syrup Urine Disease, Hyperglycinaemia, Hyperprolinaemia, Arginine Succinic Urea, Histidinaemia, Tyrosinosis, Carbohydrate and Protein Intolerance, Malabsorptions, Cystic Fibrosis, Glycogen Storage Disease.

MILNER SCIENTIFIC AND MEDICAL RESEARCH

Now maintains a world-wide interest in every aspect of metabolism in disease, and products are directly available in most countries.
