

Most diabetics  
are prescribed 'dirty'  
British Beef Insulin...

NOW

# HYPURIN

Highly purified bovine insulins

## The Clean Beef Alternative.

For over 50 years the majority of British diabetics have been prescribed beef insulin. For the most part satisfactorily. The source has been reliable, continuous and comparatively inexpensive. But it was 'dirty'.<sup>1</sup> And since there was no known benefit in injecting contaminants it made sense to remove proinsulin, intermediate insulins and the high molecular weight proteins. They are thought to promote antibody formation which could reduce the predictability and consistency in patient response.

The result, Hypurin, a highly purified range of beef products containing 99% insulin and other active insulin-like molecules.

On changing to purified pork insulins dosage reductions have

been claimed. But these can be unpredictable in both magnitude and timing. Hypoglycaemia can result.

Yet USA and recent Australian experience has confirmed that patients can be transferred from conventional to highly purified beef insulins without disruption of the normal day to day management of diabetics.

Finally, Hypurin may be expected to reduce the incidence of local skin reactions and lipoatrophy.

In a nut-shell, Hypurin retains all the benefits of traditional beef insulin. But it's clean.

# HYPURIN

Everything that's good about British Beef  
...But clean!

THE UNIVERSITY OF LEEDS

DEPARTMENT OF PAEDIATRICS AND CHILD HEALTH

DEPARTMENT OF COMMUNITY MEDICINE AND GENERAL PRACTICE

COURSE IN DEVELOPMENTAL PAEDIATRICS AND CHILD HEALTH

It is proposed to hold a further course in the academic year of 1980/81 in association with Hospital and Child Health Specialists in the Leeds Region.

The course will consist of a whole-time introductory week, commencing Monday 6 October 1980, followed by 3 ten-week terms of day-release on Wednesdays. The outline of the syllabus is as follows:

TERM I : The Child with Physical Handicaps

TERM II : The Child with Emotional and Educational Handicaps

TERM III: Current Topics in Child Health

The course is recognised under the National Health Service Regulations 1974. The whole course fee is £250. The introductory week is £50.

The course will be designed so that the introductory week, the separate terms and the individual study days of the third term are each self-contained, and it will be possible to attend selected parts of the course only. The introductory week and the third term are recognised under Section 63.

Application forms may be obtained from Professor R. W. Smithells, Department of Paediatrics and Child Health, 27 Blundell Street, Leeds LS1 3ET.

(25257-4)

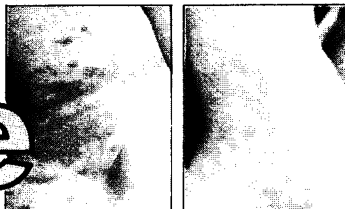

**When  
efficacy  
is the need  
and safety  
the concern**

No need now to  
sacrifice efficacy for  
safety because Eumovate  
fulfils the need for a  
corticosteroid preparation  
with greater topical activity than hydrocortisone, yet  
with a wide margin of safety.

**Eumovate**

(clobetasone butyrate)

a unique balance of efficacy and safety

**Prescribing information**

Eumovate is suitable for treating the milder forms of eczema, seborrhoeic dermatitis and other steroid responsive skin conditions.

**Dosage and administration**

Apply up to four times a day until improvement occurs, when the frequency of application may be reduced.

**Contra-indications**

Bacterial, fungal or viral diseases of the skin.

**Precautions**

In infants and children, long-term continuous topical corticosteroid therapy should be avoided where possible, as adrenal suppression can occur. In infants, the napkin may act as an occlusive dressing, and increase absorption. Appropriate antimicrobial therapy should be used concurrently whenever treating inflammatory lesions which have become infected.

Any spread of infection requires withdrawal of topical corticosteroid therapy and, possibly, commencement of systemic chemotherapy.

As with all corticosteroids, prolonged application to the face is undesirable. Topical steroids should not be used extensively in pregnancy, i.e., in large amounts or for prolonged periods.

**Side effects**

In the unlikely event of signs of hypersensitivity appearing, application should stop immediately. If large areas were to be treated, some patients could absorb sufficient steroid to cause transient adrenal depression despite the low degree of systemic activity associated with clobetasone butyrate.

Local atrophic changes could occur where moisture increases absorption of steroid, but only after prolonged use.

**Basic NHS cost** (exclusive of VAT):  
25 gram tube £1.63 (also available  
100 gram tubes).

**Product Licence numbers**

Cream: 4/0233  
Ointment: 4/0254

**Glaxo**

**leaders in topical steroid therapy**

breakfast Mum?”**

**Even more variety from *milupa***

**Granulated Rusk with Mixed Fruit.**

A new fruity-tasting companion product to the highly successful Granulated Rusk. The mixed fruits include pineapple, apple, banana, and orange—introducing Baby to new and delightful tastes for the future.

**Oat Breakfast Cereal.  
Oat Breakfast Cereal with Apple.**

Two new breakfasts for Baby, based on the tradition of oats! There's whole grain goodness in these delicious oat varieties. Now the Milupa range offers the choice of rusk, wheat, rice and oat-based products—and all designed and fortified to satisfy Baby with a variety of balanced nourishment.

- 11 vitamins plus Vitamin C
- Added calcium and iron
- Modified milk already added
- Easy to digest
- Excellent taste
- Fast convenient preparation

If you would like samples of these three products and further information contact Dept AD3, Milupa Ltd., Milupa House, Cowley Peachey, Uxbridge, Middlesex. Tel. West Drayton 48286.

## Contents

- Carbohydrate Metabolism in Phenylketonuria** ..... 000  
R. M. STEWART, S. HEMLI, E. H. KOLODNY, A. L. MILLER, AND J. A. PALLOTTA (Boston, Massachusetts)  
Human subjects with phenylketonuria were placed on normal and low phenylalanine diets for two months, after which time a series of tolerance test were performed.
- Alloisoleucine Formation in Maple Syrup Urine Disease: Isotopic Evidence for the Mechanism** ..... 111  
D. E. MATTHEWS, E. BENGALIM, M. W. HAYMOND, AND D. M. BIER (St Louis, Missouri)  
These studies indicate that plasma isoleucine in patients with maple syrup urine disease are equilibrated through ketoenol tautomerization.
- A Micromethod for the Analysis of Cryoglobulins Via Laser Nephelometry: Evaluation and Comparison to C1q Binding Activity in Autoimmune Diseases in Pediatrics** ..... 222  
L. C. YANG, M. E. NORMAN, AND R. A. DOUGHTY (Philadelphia, Pennsylvania)  
Using laser nephelometry microtechnique, levels of serum cryoglobulins were measured in children suspected of having immune complex disorders.
- Hormone-Stimulated Cyclic AMP Production by Skin Fibroblasts Cultured from Healthy Persons and Patients with Cystic Fibrosis** ..... 333  
P. B. DAVIS, S. C. HILL, AND M. M. ULANE (Bethesda, Maryland)  
This study investigates the influence of isoproterenol and prostaglandin E<sub>1</sub> on generating cAMP in fibroblasts from normal patients and from patients with cystic fibrosis.
- Effects of Furosemide and Acute Salt Loading on Vasopressin and Renin Secretion in the Fetal Lamb** ..... 444  
S. R. SIEGEL, R. D. LEAKE, R. E. WEITZMAN, AND D. A. FISHER (Torrance, California)  
Arginine vasopressin responsiveness to hypertonic saline and furosemide was assessed in the fetal lamb at various gestational ages.
- Composition of Pulmonary Lavage Fluid in Control and Reserpine-Treated Rats Following Chronic Isoproterenol and Pilocarpine Administration** ..... 444  
T. P. MAWHINNEY, J. R. MARTINEZ, M. S. FEATHER, AND G. B. BARBERO (Columbia, Missouri)  
Lung lavage samples from reserpine-treated rats administered either isoproterenol or pilocarpine were assayed for total protein, lipid, and carbohydrate content.
- Characterization and Quantitation of a Zinc-Binding Ligand in Human Milk** ..... 555  
G. W. EVANS AND P. E. JOHNSON (Grand Fords, North Dakota)  
These studies suggest that the bioavailability of zinc in human milk is due to the presence of picolinic acid which also appears to facilitate zinc absorption in the intestine.
- Effect of Chemical Sympathectomy on Myocardial Cell Division in the Newborn Rat** ..... 666  
J. D. KUGLER, P. C. GILLETTE, S. P. GRAHAM, A. GARSON, M. A. GOLDSTEIN, AND H. K. THOMPSON (Houston, Texas)  
The DNA polymerase activity of myocardial cells was measured in newborn rats which had undergone myocardial chemical sympathectomy.
- Adenosine Deaminase Deficiency Without Immunodeficiency: Clinical and Metabolic Studies** ..... 777  
W. BORKOWSKY, A. A. GERSON, L. SHENKMAN, AND R. HIRSCHORN (New York, New York)  
The authors report unexpected symptoms in a prospective case study of a child diagnosed at birth as having adenosine deaminase deficiency.
- Letter to the Editor: Frequency of the PD Allele** ..... 888
