

Prescribing Notes:
Indications: Lioresal is indicated for the relief of spasticity in multiple sclerosis, other spinal lesions, and also for the treatment of spasticity of cerebral origin in children and young adults (under 25 years of age). Dosage: It is advisable to commence treatment with Lioresal at a daily dosage of 10mg, taken in three divided doses, increasing slowly at intervals of at least 3 days, until the optimum effect is achieved. Satisfactory control is usually obtained with doses up to 60mg daily, but careful adjustment is often necessary to meet the requirements of individual patients. A maximum daily dose of more than 100mg is not advised unless the patient is in hospital and under careful supervision. There have been reports of tolerance. Side effects: Nausea; vomiting; daytime sedation and confusion; muscle hypotonia and fatigue. Precautions: history of peptic ulceration; severe psychiatric disturbances; concurrent administration of other hypotensives; epilepsy; cardiovascular disease; last three months of pregnancy. Price: Lioresal is supplied as 10mg tablets in Securin or pack of 300. Basic NHS price 311.50 (D/10/1980).

When efficacy is the need and safety the concern

No need now to sacrifice efficacy for safety because Eumovate fulfils the need for a corticosteroid preparation with greater topical activity than hydrocortisone, yet with a wide margin of safety.

Eumovate

(clobetasone butyrate)

a unique balance of efficacy and safety

Prescribing information

Dose

Eumovate is suitable for treating forms of eczema, seborrhoeic dermatitis and other steroid responsive skin conditions.

Dosage and administration

Apply up to four times a day until improvement occurs, when the frequency of application may be reduced.

Contra-indications

Bacterial, fungal or viral disease of skin.

Precautions

In infants and children, long-term continuous topical corticosteroid should be avoided. Where possible, topical suppression can occur. The napkins may act as an occlusive dressing, and increase absorption. Appropriate antimicrobial therapy should be used concurrently whenever inflammatory infections which have infected.

In the event of infection requires a topical steroid preparation, and possibly, systemic systemic therapy.

As with all corticosteroids, avoid application to the face or chest. Topical steroids should not be used extensively or for prolonged periods.

Side effects

In the unlikely event of signs of hypersensitivity appearing, application should stop immediately. If large areas are treated, some patients develop allergic reactions to clobetasone butyrate, possibly associated with the systemic activity associated with clobetasone butyrate.

Local atrophic changes could occur, including increased atrophy of the skin after prolonged use.

EVANS TUBERCULINS

Evans Medical Ltd., have discontinued their production of *Old Tuberculin*. *Tuberculin PPD* will continue to be available. The DHSS has accepted the Joint Committee on Vaccination and Immunisation's view that there is no need for the availability of both Old Tuberculin and Tuberculin PPD. Tuberculin PPD is recommended for use in both the Heaf and Mantoux Tests.

Tuberculin PPD together with Control Solution and Diluent will continue to be available in the following range of presentations:—

Tuberculin PPD BP

Undiluted (100,000 units per ml) For Heaf Multiple Puncture Test	— vial of 1ml — vial of 5ml
Tuberculin PPD Dilutions for Mantoux Test	
10 units per ml — 1/10,000 dilution	— vial of 1ml
100 units per ml — 1/1,000 dilution	— vial of 1ml
1,000 units per ml — 1/100 dilution	— vial of 1ml
Control Solution for Mantoux Test	— vial of 1ml
Tuberculin Diluent	— vial of 4.5ml
