

# 'CORDEX'

## SELF-BINDING CASES

*for easy and instant reference*

Made to hold one volume (12 issues) of your **ARCHIVES OF DISEASE IN CHILDHOOD**. Each case is handsomely bound with a colour to complement the journal. Spring nylon cords, to carry the journals, slide freely along the spine of the binder. The name of the journal is gold-blocked on the spine. Date labels are also provided.

**Price:** Inland £4.00; Overseas US\$12.00  
including postage (air mail overseas) and packing

**ARCHIVES OF DISEASE IN CHILDHOOD**  
BMA House, Tavistock Square, London WC1H 9JR

# If a mother can't breastfeed Milupa now offer two granulated formulae

## New Aptamil<sup>®</sup>

– a fully adapted baby milk formula that may be preferred for the newborn infant where breastfeeding is not chosen or isn't possible.

- low sodium levels
- adapted protein content
- lactose is the only carbohydrate
- added trace minerals

## Milumil<sup>®</sup>

– a modern modified baby milk that is particularly suitable when baby needs a more satisfying milk food.

- easily digested fat content
- amylose and maltodextrin in addition to lactose
- experience shows good acceptability

Everyone agrees that breastfeeding gives a baby the best start in life, but when breastfeeding is not chosen or is not possible Aptamil or Milumil can be used with confidence. They meet the latest DHSS recommendations for the composition of infant formulae and are granulated for easy mixing and measuring. Aptamil and Milumil are available from your local chemist.

For further details please contact Dept. ADC 7/82

# PEDIATRIC RESEARCH

Volume 16, No. 7

July 1982

---

## Contents

- Effects of Oral Antibiotics on Stool Flora and Overall Sensitivity Patterns in an Intensive Care Nursery** .....  
L. GRYLACK, D. NEUGEBAUER, AND J. W. SCANLON (Washington, D.C.)  
The effects of orally administered gentamicin and colistin on stool bacterial flora and overall antibiotic sensitivity patterns were evaluated in newborns at risk for neonatal necrotizing enterocolitis.
- The Effect of Sleep State on Active Thermoregulation in the Premature Infant** .....  
R. A. DARNALL, JR. AND R. L. ARIAGNO (Charlottesville, Virginia and Stanford, California)  
The data suggest that, unlike adults, active thermoregulation occurs in the premature infant during REM.
- Path Dependence of Adsorption Behavior of Mixtures Containing Dipalmitoyl Phosphatidylcholine** .....  
R. H. NOTTER, S. SMITH, R. D. TAUBOLD, AND J. N. FINKELSTEIN (Rochester, New York)  
Dipalmitoyl phosphatidylcholine adsorption from aqueous dispersion is shown to differ depending upon the method of solution preparation.
- Ontogenesis of Nerve Growth Factor and Epidermal Growth Factor in Submaxillary Glands and Nerve Growth Factor in Brains of Immature Male Mice: Correlation with Ontogenesis of Serum Levels of Thyroid Hormones** .....  
P. WALKER, M. E. WEICHSEL, JR., D. EVELETH, AND D. A. FISHER (Torrance, California)  
The authors have documented the ontogeny of nerve growth factor and epidermal growth factor in mouse submaxillary gland; nerve growth factor in the brain, and T<sub>3</sub> and T<sub>4</sub> serum concentrations.
- Interactions between Human Neutrophils and Vaccinia Virus: Induction of Oxidative Metabolism and Virus Inactivation** .....  
J. F. JONES (Tucson, Arizona)  
These data suggest an active role for human neutrophils in the genesis of and defense against virus infections.
- Presence of Abnormal Amounts of Dolichols in the Urinary Sediment of Batten Disease Patients** .....  
N. M. K. NG YING KIN AND L. S. WOLFE (Montreal Canada)  
Dolichol content in urinary sediment of patients with Batten disease were significantly elevated when compared with age-matched controls.
- Suggestion of an Abnormal Anion Exchange Mechanism in Sweat Glands of Cystic Fibrosis Patients** .....  
P. M. QUINTON (Los Angeles, California)  
The results demonstrate that the sweat glands of individuals with cystic fibrosis can reduce NaCl concentrations to normal levels at low sweat rates and, second, the concentration of organic anions and/or bicarbonate in sweat from patients with cystic fibrosis is substantially less than that in normal sweat.
- Development of Chemotactic Factor Inactivation—Fetal Lamb Model** .....  
R. TANNOUS, C. T. KISKER, AND W. R. CLARK (Iowa City, Iowa)  
Changes in chemotactic factor inactivation were found to correlate best with fetal immaturity.
- Respiratory Effects of TRH in Preterm Rabbits** .....  
T. HEDNER, J. HEDNER, J. HONASON, AND D. LUNDBERG (Göteborg, Sweden)  
The respiratory activity of newborn preterm rabbits was studied after administration of thyrotropic releasing hormone.
- Blood and Marrow Neutrophils during Experimental Group B Streptococcal Infection: Quantification of the Stem Cell, Proliferative, Storage and Circulating Pools** .....  
R. D. CHRISTENSEN, J. L. MACFARLANE, N. L. TAYLOR, H. R. HILL, AND G. ROTHSTEIN (Salt Lake City, Utah)  
Considerable differences in the myeloid tissue response to group B streptococcal infection were observed between neonatal and adult animals.
- Evidence for a Primary Defect of Pancreatic HCO<sub>3</sub><sup>-</sup> Secretion in Cystic Fibrosis** .....  
K. J. GASKIN, P. R. DURIE, M. COREY, P. WEI, AND G. G. FORSTNER (Toronto, Ontario, Canada)  
The data indicate that patients with cystic fibrosis, including those with normal pancreatic enzyme secretion, have impaired pancreatic HCO<sub>3</sub><sup>-</sup> secretion.
-

When  
efficacy  
is the need  
and safety  
the concern

No need now to sacrifice  
efficacy for safety, because  
Eumovate fulfils the need  
for a corticosteroid  
preparation with greater  
topical activity than  
hydrocortisone, yet  
with a wide margin  
of safety.

# Eumovate

(clobetasone butyrate)

a unique balance of efficacy and safety

#### Prescribing information

##### Uses

Eumovate is suitable for treating the milder forms of eczema, seborrhoeic dermatitis and other steroid responsive skin conditions.

##### Dosage and administration

Apply up to four times a day until improvement occurs, when the frequency of application may be reduced.

##### Contra-indications

Bacterial, fungal or viral diseases of the skin.  
Hypersensitivity to the preparation.

##### Precautions

In infants and children, long-term continuous topical corticosteroid therapy should be avoided where possible, as adrenal suppression can occur. In infants, the napkin may act as an occlusive dressing, and increase absorption.

Appropriate antimicrobial therapy should be used concurrently whenever treating inflammatory lesions which have become infected.

Any spread of infection requires withdrawal of topical corticosteroid therapy and, possibly, commencement of systemic antimicrobial therapy.

Caution in children: prolonged application to the face

In general, topical steroids should not be used extensively in pregnancy, i.e., in large amounts or for prolonged periods.

##### Side effects

In the unlikely event of signs of hypersensitivity appearing, application should stop immediately. If large areas were to be treated, some patients could absorb sufficient steroid to cause transient adrenal depression despite the low degree of systemic activity associated with clobetasone butyrate. Local atrophic changes could occur where moisture increases absorption of steroid, but only after prolonged use.

##### Basic NHS cost (exclusive of VAT)

25 gram tube £1.63 (also available in 100 gram tubes)

##### Product Licence numbers

Cream: 4/0233

Ointment: 4/0254
