Doctors and nurses in neonatal intensive care

Sir,

Drs Chiswick and Roberton seem to propose a new deal for neonatal nurses, but are they not really hoping to maintain doctors in the hospital service in the lifestyle to which they have been accustomed? The fact is that all acute hospital services, not only neonatal ones, demand 24 hour care by trained, and that means permanent, staff. The idea that the primary function of our hospitals is the training of doctors is out of date and should be put to rest. What other service or industry in this country discards many of its workers at the moment when they have been trained and could be of the greatest value? It is not unreasonable to suggest that the staffing structure of the great Victorian voluntary hospitals is not applicable to hospitals in the twenty first century.

Hospital medical staffing: achieving a balance

Sir,

Our fears about the future of women doctors in paediatrics were confirmed on reading the British Paediatric Association’s response to the consultative document, Hospital medical staffing: achieving a balance. Despite the intake of female medical students having been around 50% for the last decade, there is still a disproportionately small number of women reaching senior posts in a specialty recognised as popular with female doctors. While welcoming an attempt to redress the now serious problem of hospital staffing and career structure, the proposed new non-training intermediate grade seems to offer indefinite routine and emergency work to help distribute the amount of time spent on call. Experience has shown that such posts lead to frustration and loss of commitment with a deterioration in standards. We recognise that such posts would be desirable for a few female doctors but as members of the Medical Women’s Federation we thoroughly agree with their policy, which is to advise any doctor strongly against taking one of these positions, though it may appear attractive in the short term at a time of heavy domestic commitments. Adequate part time training opportunities in posts equal in quality to those filled by full time doctors would serve the needs of these women better and lead to a higher standard of care in hospitals. Later they would be able to make a
