PO-0890  THE SELF-RESPECT AND SCHOOL SUCCESS OF THE HEALTHY SIBLINGS OF THE MENTALLY DISABLED CHILDREN
B Koc, S Polat. Nursing, Bozok University School of Healthy, Yozgat, Turkey

10.1136/archdischild-2014-307384.1512

Background This descriptive study was conducted in order to determine the self-respect and school success of the healthy siblings of the trainable mentally disabled children.

Methods The data of the study was collected by informative data form and Coopersmith Self Esteem Scale between. The school grades of the healthy siblings at the end of the year were obtained from e-school system. The healthy siblings of 91 mentally disabled children who are getting private training and who have siblings were included in the study.

Results The healthy siblings of the mentally disabled children included in the study, 42.8% were between the ages of 12–14 and 57.1% were female, 42.8% were attending second-level primary school classes. The self-respect point average of the healthy siblings of the mentally disabled children was 59.2 ± 14.9; and 69.2% of them had medium level, 27.3% of them high level of self respect. The self-respect of the healthy siblings was affected by the gender of the mentally disabled sibling and the employment status of the father. The school success level of 60.4% of the healthy siblings at the end of the year was found to be 'good'.

Discussion/conclusion Supporting the self-respect and school success of the healthy siblings of the mentally disabled children in a way that they would not be affected by their siblings' disability, the families' sparing enough time for the daily needs of the healthy children and their performances at school, improving the cooperation between parents.

PO-0891  YOUR NEW FRIEND, CALLED CHANGE: EFFECTIVE IMPLEMENTATIONS ON YOUR WARD BY TRAINING THE KEY PLAYERS
K Unk, H Vermeulen, TA Slager, HH Greuter, JM Maaskant. Women’s and Children’s Clinic, Academic Medical Center, Amsterdam, Netherlands; 2Department of Surgery – Amsterdam School of Health Professions, Academic Medical Center, Amsterdam, Netherlands; 3Quality and Safety Committee, Academic Medical Center, Amsterdam, Netherlands; 4Department of Quality Assurance and Process Innovation, Academic Medical Center, Amsterdam, Netherlands

Background and aims Continuous quality improvement (QI) in healthcare is necessary. However many publications prove that often the implementation of innovations fails in daily hospital practice. We found a lack of knowledge and skills within the executing staff of our children’s clinic in this field. The aim was to develop and realise an efficient and effective training to empower the responsible staff nurses in order to improve the success rate of QI implementation projects on the wards.

Methods After a critical analysis we developed basic principles for this training:

• focus on key elements of implementation and necessary competencies
• immediately applicable in daily practice
• the use of already in-hospital available knowledge
• thorough quantitative and qualitative evaluations (oral and written).

Results In 2013 we developed, realised and evaluated this implementation training;

• developed by 6 professionals from 4 different fields
• training in 4 daily periods (afternoons) in a 3–4 weeks interval
• based on 4 implementation key-topics and 7 implementation competencies
• 14 students; simultaneously invested in their own QI projects
• student-scores (scale: 1–5) mean total training: 3.5
• high scores: applicability (4.4), personal learning efficiency (3.6), trainers (3.9).

Discussion/conclusion We successfully designed and realised a training to improve the implementation knowledge and skills of the nursing staff. At present we are improving the training (based on the evaluation figures), in the next phase we will implement this training hospital-wide.
