Item	Criteria	Notes
Item #1	Source of data is either a surveillance system or a study with a clearly defined research question(s) and/or objective(s)	score = 1 if routine surveillance or study with clear question/objectives
Item #2	Surveillance or study population is described in terms of place (geography), centres of recruitment (GP/clinic/hospital) and demographics (age, sex)	score = 1 if surveillance system coverage or study population is described in terms of place, facilities and people; score = 0 if partial or no definition/description
Item #3	Surveillance or study time period is clearly defined	score = 1 if time period is clearly defined/described; score = 0 if partial or no description
Item #4	Surveillance system design/processes or study design/methodology is described (or documented elsewhere)	score = 1 if design, processes and methods are described/documented; score = 0 if partial or no description
Item #5	Type(s) of infection included in/excluded from surveillance/study is(are) clearly defined	score = 1 if types of infection included/excluded are clearly defined; score = 0 if partial or no definition/description
Item #6	Clinical sampling methods are described (type of specimen, method of collection) or use of routine (clinical/surveillance) laboratory data indicated	score = 1 if sampling methods are described or surveillance/study is based on routinely collected laboratory data; score = 0 if partial or no definition/description
Item #7	Laboratory methods are described or use of routine laboratory data indicated	score = 1 if laboratory methods are clearly defined or surveillance/study is based on routinely collected laboratory data; score = 0 if partial or no definition/description
Item #8	Proportions are reported by total number of culture positives, rather than number of patients/samples. Data is presented in tables or pathogen breakdown is described clearly in text.	score = 1 if proportions are clearly reported by total number of culture positives; score = 0 if proportions are unclear reported or described solely in graphs without clear numeric description
Item #9	Surveillance data reported periodically or study findings reported in a peer-reviewed paper	score = 1 if surveillance system has periodic reporting (accessible online) or study has reported findings in a peer-reviewed journal; score = 0 if one-off reporting or conference abstract/poster

Good Score 8 or 9

Fair Score 5 - 7

Poor Score <5
