

Figure S1. Gram-negative infections as proportions of all invasive neonatal bacterial infections in high-income country (HIC) and low-middle-income country (LMIC) studies

Figure S2. Effects of the exclusion of possible contaminant bacterial species, e.g. skin commensals, on Gram-negative infections as proportions of all invasive neonatal bacterial infections in high-income country (HIC) and low-middle-income country (LMIC) studies

Figure S3. Gram-negative infections as proportions of all invasive neonatal bacterial infections in high-income country (HIC) and low-middle-income country (LMIC) single- and multi-site studies
