

Hepatitis B virus and other transfusion-transmissible infections in child blood recipients in Lao
People's Democratic Republic: a hospital-based study

Supplementary file

Table 1. Percentage of antibody or antigen positives among transfusion recipients and controls. Numerical data for Figure 1 in the main manuscript

	Transfusion recipients	Controls	P-value
	n (%) positive	n (%) positive	
HBsAg RDT (n=600)	6/300 (2.0)	7/300 (2.3)	0.5
Anti-HBs (n=599)	176/299 (58.9)	115/300 (38.3)	<0.01
Anti-HBc (n=600)	56/300 (18.7)	58/300 (19.3)	0.459
HBsAg (n=600)	8/300 (2.7)	9/300 (3.0)	0.755
Anti-HCV (n=599)	8/299 (2.7)	10/300 (3.3)	0.582
Anti-HEV (n=577)	22/293 (7.5)	36/284 (12.7)	0.006
Anti-Parvovirus (n=592)	7/297 (2.4)	25/295 (8.5)	0.001
